

ASHCROFT SWITCHES
CLEANED FOR GASEOUS OXYGEN SERVICE – X6B

Switches must be properly cleaned when used on oxygen service. This cleaning process is done to remove all traces of hydrocarbons, such as: methane, butane, oil, petroleum, etc., from all the wetted parts. In addition, a label is attached to each unit that states: OXYGEN – USE NO OIL, and the units are then packaged in an air-tight plastic bag to prevent contamination.

AVAILABLE SWITCH TYPES

- All Ashcroft Pressure Switches equipped with Teflon, Viton, or stainless steel diaphragms.
- All Ashcroft Differential Pressure Switches equipped with Teflon or Viton diaphragms.
- All Ashcroft Inches of Water Switches equipped with Teflon or Viton diaphragms.

AVAILABLE RANGES

- Pressure, Differential and Inches of Water Switches – all catalog ranges.
